Analysis of petrography and soils in Semipalatinsk District of Kazakh SSR

Assistant Director, Scientific Intelligence

To describe the characteristics of terrain, petrography, soils, flora, and lakes in an area bounded by the following coordinates
45° - 53°N; 75° - 85°E

The study will discuss only the principal or dominant classifications of the above features. Greatest emphasis will be placed upon minerals or chemical composition of soils, rocks and lakes. Terrain data will be supplied by providing the best available topographic maps.
